QashqAI Voice - Ethical Declaration

Date: 2025-07-01

Author: Siefollah Aslani

QashqAI Voice is not a product-it is a principled effort to restore voices, memories, and dignity where technology has often overlooked them.

This project uses OpenAI tools such as Whisper, GPT, and TTS with a singular focus: to empower marginalized, blind, migrant, and linguistically endangered communities with accessible voice-first technology.

It operates without commercial goals or centralized data extraction. Instead, it emphasizes decentralized knowledge sharing, cultural memory preservation, and inclusive design across Persian, Turkish, Kurdish, and other suppressed dialects.

This document serves as a public declaration of ethical intent, ensuring that QashqAI Voice remains committed to:

- Transparency

- Dignity in design

- Accessibility over aesthetics

- Memory over metrics

The project welcomes collaboration, but resists commodification. It is led by Siefollah Aslani, operating independently from funding agencies, and driven by community needs, not corporate

demands.

Let this declaration be an invitation-not just to support QashqAI Voice, but to reflect on how we build technologies that remember.
